

Amendments to the claims:

This listing of the claims will replace all prior versions and listings of the claims in the application:

Listing of the Claims:

1. (Currently Amended) A method for sharing at least one media file of a portable communication device with a set of electronic communication devices, comprising:
 - detecting a setting, by a user, of the set of devices,
 - generating the at least one media file by the portable communication device,
 - providing meta information together with the media file, the meta information being information in relation to the electronic communication devices of the set, which were located in the region of the portable communication device, at the time of the generation of the at least one media file.
 - distributing at least a link, related to the media file, to at least the electronic communication devices of the set which were located in a region of the portable communication device, automatically at the time of the generation of said at least one media file, wherein the media file comprises a picture, and the at least one media file is generated when the user records the picture with a camera on the portable communication device.
2. (Previously Presented) A method according to claim 1, wherein the region is within a radius from the portable communication device.
3. (Currently Amended) A method according to claim 1, wherein detecting ~~the determination of the set of electronic communication devices, a setting~~ comprises detecting a pairing of the portable communication device with at least one electronic communication device of the set of devices.
4. (Previously Presented) A method according to claim 3, wherein detecting the

pairing comprises initiating a connection between the portable communication device and the paired electronic communication devices and wherein the step of distributing further comprises distributing the media file over the initiated connection.

5. (Previously Presented) A method according to claim 1, wherein the distributing at least a link further comprises distributing the media file to at least the electronic communication devices that were located in the region of the portable communication device, at the time of the generation of the at least one media file.

6. (Previously Presented) A method according to claim 4, in which the connection is a wireless connection.

7. (Previously Presented) A method according to claim 4, in which the connection is a Bluetooth® Wireless Technology connection.

8. (Currently Amended) A portable communication device for sharing at least one media file with a set of electronic communication devices, the portable communication device comprising:

a media unit configured to generate a media file,
a control unit, connected to the media unit, configured to detect a setting of the set of electronic communication devices, by a user, to provide meta information together with the media file in relation to the electronic communication devices of the set, which were located in the region of the portable communication device, at the time of the generation of the at least one media file, and to distribute at least a link, related to the media file, to the electronic communication devices of the set which were located in a region of the portable communication device, automatically at the time of the generation of the at least one media file, for connecting to a wireless communication unit to enable wireless communication over a wireless communication interface between the wireless communication unit associated with the portable communication device and a wireless communication unit associated with at

least one electronic communication device of the set, wherein the media file comprises a picture, and the at least one media file is generated when the user records the picture with a camera on the portable communication device.

9. (Previously Presented) A portable communication device according to claim 8, wherein the wireless communication unit associated with the portable communication device is connected to the control unit.

10. (Previously Presented) A portable communication device according to claim 8, wherein the wireless communication unit is a Bluetooth® Wireless Technology unit.

11. (Previously Presented) A portable communication device, according to claim 8, wherein the portable communication device is a mobile phone.

12. (Currently Amended) A computer program product configured to share at least one media file of a portable communication device with a set of electronic communication devices, the computer program product comprising a computer readable medium having computer readable program code embodied therein, the computer readable program product comprising:

computer readable program code configured to detect a setting of a set of electronic communication devices,

computer readable program code configured to generate the at least one media file by the first portable communication device,

computer readable program code configured to provide meta information together with the media file, the information being meta information in relation to the electronic communication devices of the set, which were located in the region of the portable communication device, at the time of the generation of the at least one media file, and

computer readable program code configured to distribute at least a link, related to the media file, automatically to the electronic communication devices in the set which were
